### POWER PRO 6000 Ultrasonic Cleaner

The 85-gallon Power Pro 6000 is a large capacity ultrasonic cleaning system with 6000 watts of peak ultrasound. This unit is 6" deeper than any of our smaller models and has a 24" width opening. The robust design lends itself to larger parts cleaning requirements, including transmission cases, larger castings and molds, large food processing applications and heat exchangers. The unit is portable, so it can easily be moved within a shop environment without a forklift.
