

How “Managed Inventory” lets a camera company focus on improved production.

Accu-sembly provides the PCB assemblies that are used in the Surround Video Omni G3 shown above.

What we do:

- **Cost Control:** With Managed Inventory, our customers can make purchasing decisions based on forecasts, allocations, critical need, or cost while not being constrained by the typical consignment or turnkey models.
- **Flexibility:** By having all parts warehoused at the point of manufacture, we are able to quickly respond to changing demand or large and urgent orders.
- **Convenience:** Accu-sembly handles all of the day to day inventory management tasks enabling the customer to focus on other issues.

At Accu-sembly, our customer’s success is our success. We pride ourselves on supporting our clients in taking on new jobs and orders and we strive to make sure they can respond to the ever-changing needs of their customers. Managed Inventory gives our customers a leg up on their competition through a more convenient approach to inventory.

The Client: Arecont Vision

Arecont Vision has led the way in surveillance camera technology with their world-class megapixel cameras attracting the business of some of the largest and best known companies in the world. Their cameras have been selected by municipalities across the globe in addition to some of America’s top universities and sports stadiums. Arecont Vision needed reliable circuit board assemblies for these important clients with more adaptability and convenience than build-to-order and turnkey manufacturing could provide. Accu-sembly met that demand with our Managed Inventory system

The Process: Managed Inventory

Through Managed Inventory, Accu-sembly provides our customers the opportunity to strategically control the supply of critical inventory, while we validate, maintain, allocate, and track their inventory directly at our facility. All supplier shipments are validated to confirm the correct part and quantity are received. They are then labeled with the customer part number, purchase order, and receipt date, stored in a secure area, and recorded into our inventory tracking system. Accu-sembly manages the allocation of inventory

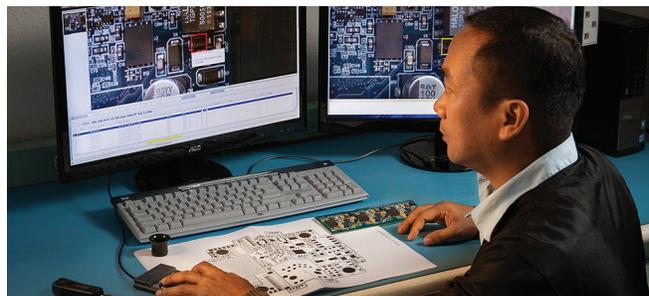

“The whole production process is now much simpler so we can better respond to our clients.”

*Raul Calderon -Senior Vice President,
Arecont Vision*

based on a prioritized build schedule to ensure that all jobs are completed when needed to support their valuable clients. Daily reports are provided to communicate all inventory transactions in addition to current and scheduled production status. According to Raul Calderon, Arecont Vision's Senior Vice President, "Accu-sembly's system is exactly what we need from our circuit board assembly manufacturer because it allows our company to retain control of our strategic purchasing and costs, while delegating the day to day inventory management activities to them."

The Benefits: Flexibility & Convenience

Since Arecont Vision partnered with Accu-sembly, they have been able to adapt and adjust to the ever-shifting marketplace. With the world moving so fast, the added practicality of the Managed Inventory program allows their company to react seamlessly to their customers' needs. Just ask Arecont Vision what it has done for them. "Partnering with Accu-sembly has given us the flexibility to shift with market demands and the confidence to accept those large, urgent orders. We now have no problem adjusting to our clients' needs because we know that even with changing orders, Accu-sembly will make sure all parts are accounted for and will meet our schedules."
